BALLARDVALE

This village was named for Timothy Ballard, 6th in descent from William (1) Ballard, one of the original grantees of the town of Andover. Timothy held all the privileges along the Shawshin River, and for years, his was the only estate in this section. His land was rented for cattle grazing. He owned a blacksmith shop and a cider mill, and at his home, summer boarders from the city were accomodated. He built the mill house in 1790. In 1803, his was one of the two homes in the village.

In 1836, the building boom started, for in that year a woolen manufacturing company was incorporated at Andover, under the name of the Ballard Vale Company. Mr. John Marland was treasurer and agent and he and his brother, William S. Marland, withdrew from the Marland Mfg. Co. of South Parish. They bought the property and mill rights formerly owned by Timothy Ballard, and for him, they named the company and the village, Abraham J. Gould, who had married a niece of Timothy's, -Mark Newman, and others, were connected with the new organization. They manufactured cotton and woolen goods and experimented with silk, introducing mulberry trees into the Vale for the cultivation of silk worms.

The **early** employees of the mill were mainly of Scotch, English and Irish origin, skilled in their crafts. Thrifty, industrious and ambitious, they were soon owners of their homes and striving to educate their children.

This brief compilation will merely serve as a genealogical link between the "old country" and the new.

RESEARCH REPORT

ON THE EFFECTS OF VIBRATION ON THE
GROWTH OF CRYSTALS FROM AQUEOUS
SOLUTIONS

BY J. H. HARRIS AND J. E. HARRIS

DEPARTMENT OF CHEMISTRY, UNIVERSITY OF CHICAGO

CHICAGO, ILLINOIS 60607

ABSTRACT: The effects of vibration on the growth of crystals from aqueous solutions have been studied. It was found that vibration increases the rate of growth of crystals from aqueous solutions. The rate of growth increases with increasing frequency of vibration. The rate of growth also increases with increasing amplitude of vibration. The rate of growth is independent of the direction of vibration.

INTRODUCTION: The growth of crystals from aqueous solutions is a process of great importance in many fields of science and industry. It is a process which is controlled by many factors, including temperature, concentration, and the presence of impurities. One factor which has not been studied extensively is the effect of vibration on the growth of crystals.

EXPERIMENTAL: The experiments were carried out in a specially designed apparatus. The apparatus consisted of a container of aqueous solution, a crystal of the substance to be studied, and a vibrator. The vibrator was connected to a variable frequency oscillator. The frequency of vibration was varied from 0 to 100 cycles per second. The amplitude of vibration was varied from 0 to 10 mm.

RESULTS: The results of the experiments are shown in Figure 1. The rate of growth of crystals increases with increasing frequency of vibration. The rate of growth also increases with increasing amplitude of vibration. The rate of growth is independent of the direction of vibration.

DISCUSSION: The results of the experiments show that vibration increases the rate of growth of crystals from aqueous solutions. This is probably due to the fact that vibration increases the rate of diffusion of the solute to the crystal surface.

CONCLUSIONS: The growth of crystals from aqueous solutions is a process which is controlled by many factors. One factor which has not been studied extensively is the effect of vibration on the growth of crystals. The results of the experiments show that vibration increases the rate of growth of crystals from aqueous solutions.

It was drawn over to the Boynton place and was then owned by Samuel Blanchard. It was later taken up the road near the almshouse. The Foster house was built in 1770.

(I think the old house on the site when Ballard Lovejoy took it in 1835, was one left by the heirs of Wm. Foster, which had been drawn from Boxford and set up in West Parish. Gideon found it too old to use and built the new one. When B. Lovejoy pulled the old house down and built the cottage in 1843, he said the timbers were punk, it was so old.

John French bought it and sold to Sam Kneeland. His son Walter, and Walter's widow, Abby (Chase) held it until 1859. A howell was there in 1862 and Artemus Hardy took it in 1863, and kept bachelor's hall. It was at the junction of the Tewksbury Road, South and the Tewksbury Road, West, past Haggett's Pond.

This, -the James Stratton place- was on an old stage road behind the ~~Jameson~~ house. The stage used to go from Andover to Lowell past E.G. Holt, over Jas. Abbott's bridge and up through the fields past Baker's meadow. Stratton had the place 1856 and Jameson was on it 1863. It was built by Franklin Heald, 1849.

The first house occupied by Jameson, was originally owned by a Ballard, as long ago as 1710, according to Seth Chase, who was b. there, 1809. I conclude the house was a Blanchard homestead, held by Joseph Blanchard and last owned by David Blanchard, who d. 1776.
